Information

19th BEIJING ESSEN WELDING & CUTTING was a huge success

916 exhibitors at the most important trade fair of this industry for the Asian region

Many German companies use the fair to enter the market of the future, China

Essen, July 7, 2014

The BEIJING ESSEN WELDING & CUTTING 2014 impressively confirmed its position as Asia’s most important trade fair of the joining, cutting and surfacing industry: the largest industry event after the world’s leading fair in Essen, the SCHWEISSEN & SCHNEIDEN, attracted a total of 916 exhibitors from 27 countries. Almost one in five travelled expressly from Europe and America. The participating companies were assured major international interest: more than 22,400 trade visitors from some 60 countries used the BEIJING ESSEN WELDING & CUTTING to gain a comprehensive overview of the market.

"These impressive figures show what trust the BEIJING ESSEN WELDING & CUTTING enjoys in the industry," says Oliver P. Kuhrt, Chairman of the Management Board of Messe Essen, summing up. "And they confirm our strategy of establishing the know-how of the world’s leading fair in Essen, the SCHWEISSEN & SCHNEIDEN, in markets of the future and therefore of opening up new sales opportunities for joining, cutting and surfacing technology."

Focus on robot and automation technology

The trade fair, held every year alternately in Beijing and Shanghai, presented the latest industry trends in seven halls of the New China International Exhibition Centre. The offering ranged from complete plants, control systems and testing facilities to workplace equipment. One special focus this year was robot and automation technology. Both exhibitors and visitors were satisfied with the trade fair, which was organised jointly by Messe Essen, the German Welding Society (DVS – Deutscher Verband für Schweißen und verwandte Verfahren e.V.), the China Welding Association and the Chinese Mechanical Engineering Society (CMES).
Joint stands from all over the world highlighted the international significance of the fair. Under the roof of the German pavilion, 30 manufacturers and suppliers presented quality products, high tech and services "Made in Germany" on 600 square metres. The German participation was sponsored by the Federal Ministry for Economic Affairs and Energy at the request of the DVS.

The BEIJING ESSEN WELDING & CUTTING offers the opportunity to exchange views on technical issues in various forums. Experts held papers, for example, on new advanced laser welding technology in the field of automobile manufacturing and cost factors in plasma automated cutting.

The next BEIJING ESSEN WELDING & CUTTING is being held in Shanghai from 1 to 4 June 2015.
